

Scaled Down Truck-Mounted Cutaway Model

The Cutaway Striper is designed to give easy access to the gun carriage for machines that are designed to be operated by one man. The bed deck is eliminated over the top of the gun carriage, allowing easy access for gun adjustment and maintenance. The carriage is protected by the rear bumper.

The striper itself is custom-designed in either an airless or air-spray configuration. This bed design is a good upgrade to a palletized striper.
